

## Electronic Supplementary Material

### Acknowledgements for local activities

We are thankful to the following people, organisations and institutions for **arranging, managing and letting us use our study sites**: Maira Bonini and her team of LHA Milano Città Metropolitana, Francesco Vidotto, Silvia Fogliatto, the University of Torino in Italy, the Italian municipalities of Corbetta and Magnago, Rolf Dänzer, Adrian Zanger, Armasuisse Immobilien, Waffenplatz Thun in Switzerland, Regula Schwarz, Frédéric Bieri, Christian Bohren, Nicolas Delabays, family Sabino and personnel of the Park Hotel Rovio, Marta Rossinelli, Françoise Serre, Lycée Terre d'Horizon, the French municipality of Creusot Montceau, the Austrian Army Administration, Kisalföldi Hulladékgazdálkodási Nonprofit Kft, József and Emese Gula, and Dániel Zagyvai.

We greatly appreciated the help of the following people in **data collection and technical support**: Eva van Cleef, Simon Vandenbrande, Elisa Cardarelli, Silvia Stefanelli, Stéphanie von Bergen, Daniel Slodowicz, Bastien Boschung, Anne Haeberle, Alain Werro, Anne-Catherine Cossy-Pasche, Ágnes Csiszár, Zsuzsa Keresztes, Shahid Farooq, Nihat Akyol, Uğur Çaldıran, Tolga Sari, Iva Braje, Tin Smrekar, Jasna Markić, Katinka Blazsek, Barbara Tóth, Péter Rehova, Nina Waldhäuser, Alida Ndoci, Samuel Priemayr, Hannes Karrer, Martin Karrer, Bernhard Plachy, Bernhard Urban, Veronika Gregušová, Lenka Botyanszká, Monika Tóthová, Zenon Guzik, Katarzyna Bzdęga, Jadwiga Derwisz, Grażyna Klecz, Anna Gawron, Georgi Fayvush, Hripsime Hovannisanian, Ivana Milovic, Eugenia Nagoda, Titus Anastasiu, Dániel Zagyvai, Dénes Bartha, Linda Kamola, Zsigmond Nagy, Daniyar Memedemin, Marius Skolka, the technical staff of Agroecologie Unit INRA Dijon, Zenon Guzik, Katarzyna Bzdęga, and Emese Joó.

We acknowledge **financial support** for local activities from the Statutory funds of the Department of Botany and Nature Protection, University of Silesia in Katowice, Poland (to BTG), from the Gaziosmanpasa University, Turkey (grant BAP-2012/106 to HO), the Rectors' Conference of the Swiss Universities (SCIEX-NMSch Project 12.108 'BLISRo' to CP), the Plant Health Laboratory of the French Agency for Food, Environmental and Occupational Health & Safety (to GF), the ÚNKP-16-3 New National Excellence Program of the Ministry of Human Capacities of Hungary (to KN), the Scientific Grant Agency of the Ministry of Education, Science, Research and Sport of the Slovak Republic and Slovak Academy of Sciences (VEGA 1/0827/14 to PT), the European Union and the State of Hungary co-financed by the European Social Fund in the framework of the TÁMOP-4.2.4.A/2-11/1-2012-0001 Hungarian 'National Excellence Program' (to GKaz), the Hungarian Research Centre of Excellence (1476-4/2016/FEKUT to MZ and ZD), and the University of Natural Resources and Life Sciences Vienna, Austria (to GKar).

**Table S1.** Number of study sites for each of the European bioclimatic regions where *A. artemisiifolia* occurs. The Anatolian, Atlantic and Boreal region have some records of *A. artemisiifolia* but it is unknown if these include any established populations.

| bioclimatic region | sites |
|--------------------|-------|
| continental        | 18    |
| pannonian          | 11    |
| alpine             | 5     |
| mediterranean      | 5     |
| blackSea           | 4     |
| steppic            | 2     |
| anatolian          | 0     |
| atlantic           | 0     |
| boreal             | 0     |

**Table S2.** Structure and fit of the linear mixed effect models of the relation between *A. artemisiifolia* reproduction and size, corresponding to Fig. 2.

| response variable      | fixed effects                 | random effects    | N plants | N sites | R <sup>2</sup> marginal | R <sup>2</sup> conditional | Fig. |

**Table S4.** The environmental factors of the model "SiteReduced" on individual plant volume, a generalised linear mixed-effects model of environmental variables remaining after stepwise AIC-based selection of factors from the full model, and then fit by REML. Estimates represent coefficients of log(plant volume in cm<sup>3</sup>) with their Standard Error; the t-value is the ratio between the Estimate and its Standard Error, and the p-value the probability that this t-statistic is drawn from a standard t-distribution with "df" degrees of freedom.

| Environmental factor                | Estimate | Std.Error | df   | t-value | p-value |
|-------------------------------------|----------|-----------|------|---------|---------|

(Adjusted p values reported -- single-step method)

**Fig. S2.** Variation in a) bare soil cover, b) *Ambrosia* density, and c) cover by vegetation other than *Ambrosia* across habitat types (AR=arable, GR=grassland, IN=infrastructure, RU=ruderal). Boxplots represent variation across all plots of all sites per habitat type.
